

KEY

- 20 µg/m³
- 30 µg/m³
- 40 µg/m³

Vegetation Protection Limit Value is 30 µg/m³ (Table 2). The 5km restrictions applied to this limit value are illustrated on Figure 1. Concentrations below the limit value have no statutory significance, but are shown to illustrate the fall in concentration with distance from the Airport and major roads.

Background concentrations of NOx are in the region of 20 µg/m³.

Job Title

Stansted Generation 1

Drawing Title

Updated Figure 8  
Annual mean concentration of NOx for the 35 mppa case in 2014 modelled using 2003 meteorological data
